

▶ KASPERSKY ENDPOINT SECURITY FOR BUSINESS Select

Tools to enable a mobile workforce, ensure IT security policy conformity and block malware.

Kaspersky's 'Select' tier includes mobile device deployment and protection via Mobile Device Management (MDM) and mobile anti-malware. Endpoint control tools (web, device and application) help your organisation enforce IT policy, keeping the essential elements of your IT environment secure.

The Protection and Management Capabilities You Need.

Kaspersky has built powerful enterprise-class features into the progressive tiers of our offerings, but we've made the technology uncomplicated and simple enough for any sized business.

Which Tier is Right for You?

- CORE
- **SELECT**
- ADVANCED
- TOTAL

FEATURES INCLUDED:

- ANTI-MALWARE
- FIREWALL
- CLOUD-ASSISTED PROTECTION VIA KASPERSKY SECURITY NETWORK
- APPLICATION CONTROL
- APPLICATION WHITELISTING
- WEB CONTROL
- DEVICE CONTROL
- FILE SERVER PROTECTION
- MOBILE DEVICE MANAGEMENT
- MOBILE ENDPOINT SECURITY (FOR TABLETS AND SMARTPHONES)

KEY FEATURES:

POWERFUL ENDPOINT ANTI-MALWARE

Kaspersky's 'best of breed' scanning engine operates at multiple levels in the operating system, rooting out malware. The cloud-based Kaspersky Security Network (KSN) protects users in real time against new threats.

FLEXIBLE, GRANULAR CONTROL TOOLS

A cloud-based, categorised database of safe and unsafe applications and websites helps the administrator to set and enforce policies for applications and web surfing, while granular controls ensure that only specific devices can plug in to machines on the network.

EFFICIENT MOBILE DEPLOYMENT AND SECURITY FOR SMARTPHONES AND TABLETS

Agent-based mobile security is available for Android™, BlackBerry®, Symbian and Windows® Mobile devices. Mobile device policies and software can be deployed securely over the air to these and to iOS devices through Kaspersky MDM.

VULNERABILITY SCANNER

Tuned to flag hardware and software vulnerabilities which could be exposed to an attack.

ENDPOINT PROTECTION FEATURES:

FREQUENT UPDATES AND SIGNATURE-BASED PROTECTION

Industry-proven traditional signature-based method for detecting malware threats.

BEHAVIOURAL ANALYSIS PERFORMED BY SYSTEM WATCHER

Delivers proactive protection against threats that have not yet been recorded in signature databases.

CLOUD-ASSISTED PROTECTION

The Kaspersky Security Network (KSN) provides a response to suspected threats, much faster than traditional methods of protection. KSN's response time to a malware threat can be as little as 0.02 seconds!

HOST-BASED INTRUSION PREVENTION SYSTEM (HIPS) WITH PERSONAL FIREWALL

Predefined rules for hundreds of the most commonly used applications reduce time spent on configuring the firewall.

ENDPOINT CONTROLS:

APPLICATION CONTROL

Enables IT administrators to set policies that allow, block or regulate applications (or application categories).

WEB CONTROL

Means that endpoint-based surfing controls follow the user — whether on the corporate network or roaming.

DEVICE CONTROL

Allows users to set, schedule and enforce data policies with removable storage and other peripheral device controls — connected to USB or any other bus type.

DYNAMIC WHITELISTING

Real-time file reputations delivered by the Kaspersky Security Network ensure your approved applications are malware free and help Maximise user productivity.

MOBILE SECURITY FEATURES:

INNOVATIVE ANTI-MALWARE TECHNOLOGIES

Combined signature-based, proactive and cloud-assisted detection results in real-time protection. A safe browser and anti-spam increase the security.

DEPLOYMENT WITH OVER THE AIR (OTA) PROVISIONING

The ability to pre-configure and deploy applications centrally using SMS, email and PC.

REMOTE ANTI-THEFT TOOLS

SIM-Watch, Remote Lock, Wipe and Find all prevent unauthorised access to corporate data if a mobile device is lost or stolen.

APPLICATION CONTROL FOR MOBILE DEVICES

Monitors applications installed on a mobile device according to the pre-defined group policies. Includes a "Mandatory Application" group.

SUPPORT FOR EMPLOYEE OWNED DEVICES

Corporate data and applications are isolated in encrypted containers which are transparent to the user. This data can be wiped separately.

▶ THE INDUSTRY'S ONLY TRUE SECURITY PLATFORM.

One Management Console

From one 'single pane of glass', the administrator can view and manage the entire security scene — virtual machines, physical and mobile devices alike.

One Security Platform

Kaspersky Lab developed our console, security modules and tools in-house rather than acquiring them from other companies. This means the same programmers working from the same codebase have developed technologies that talk together and work together. The result is stability, integrated policies, useful reporting and intuitive tools.

One Cost

All tools are from one vendor, delivered in one installation — so you don't have to go through a new budgeting and justification process to bring your security risks in line with your business objectives.

NOT ALL FEATURES ARE AVAILABLE ON ALL PLATFORMS.
